RHETORIC AND COURTLINESS IN EARLY MODERN LITERATURE

Rhetoric and Courtliness in Early Modern England explores the early modern interest in conversation as a newly identified art. Conversation was widely accepted to have been inspired by the republican philosopher Cicero. Recognising his influence on courtesy literature – the main source for ‘civil conversation’ – Jennifer Richards uncovers new ways of thinking about humanism as a project of linguistic and social reform. She argues that humanists explored styles of conversation to reform the manner of association between male associates; teachers and students, buyers and sellers, and settlers and colonial others. They reconsidered the meaning of ‘honesty’ in social interchange in an attempt to represent the tension between self-interest and social duty. Richards explores the interest in civil conversation among mid-Tudor humanists, John Cheke, Thomas Smith and Roger Ascham, as well as their self-styled successors, Gabriel Harvey and Edmund Spenser.

JENNIFER RICHARDS is Lecturer in English at the University of Newcastle upon Tyne. She is the editor, with James Knowles of *Shakespeare's Late Plays: New Readings* (1999) and the author of articles in *Renaissance Quarterly* and *Criticism*.

Many conversations have helped to shape this book, especially those I have shared with Lorna Hutson, Andrew McRae, Markku Peltonen, Neil Rhodes and Alison Thorne, all of whom commented generously upon chapters. Paul Suttie and Ariel Meirav were supportive friends in the early stages of my research; I am also very grateful for the encouragement offered by Jonquil Bevan and Ian Donaldson at this time. Thanks are also owed to Kate Chedgzoy, James Knowles, Steve Milner, Ceri Sullivan and Katherine Wilson. I benefited greatly from the good company and wide knowledge of Cathy Shrank and Phil Withington who showed me how fruitful conversation can develop between early modern literary critics and historians. Penny Fielding listened patiently to my ideas in their different versions; she also kept a very good table. Beate Muller has been an invaluable friend throughout my career at Newcastle. Thanks go to my mother, Wendy Francis, who insisted that I shorten my sentences. My two readers at Cambridge University Press gave the manuscript scrupulous attention. I am grateful to my colleagues in the English department at the University of Newcastle, who encouraged me to write the book that I wanted, and, in particular, to Mike Pincombe, who read far too many drafts of most of the chapters. My most tireless of readers and most generous of friends, though, is Dermot Cavanagh and it is to him that this book is dedicated.

This project would not have been completed without an AHRB research award in 1998–9. My research was also supported by British Academy Overseas Conference Grants in 1997 and 1999, enabling me to meet with Spenser colleagues at Kalamazoo. Parts of chapter 2 appeared in *Criticism* (1999) and *Renaissance Quarterly* (2001); I would like to thank the editors of these journals for permission to reprint this material.

Introduction

Recent years have seen a shift in focus among early modern English and British social historians from the ‘demographic, economic and institutional’ aspects of every day life to the cultural values and *mentalité* of ‘communities’.¹ An area of study receiving fresh attention is the courtesy literature of 1500–1800 which disseminated new codes of conduct. Mostly, research in this area has established that the preoccupation with manners is an eighteenth-century phenomenon. Social historians of this period have argued that an increasing emphasis on good manners is related to the development of a consumer society, or have found in this century’s conduct books a precursor to the bourgeois etiquette books of the nineteenth. This orientation towards the eighteenth century has inhibited debate about manners and sociability in the earlier period.² Yet, as Norbert Elias reminds us in *The Civilising Process* (1939), and, more recently, Anna Bryson in *From Courtesy to Civility* (1998), the change in the advice on manners actually begins in the early sixteenth century, with treatises such as Baldassare Castiglione’s *Il libro del cortegiano*, printed in 1528.

The new emphasis on cultural values has the potential to bring social historians into closer contact with literary critics. ‘Literary specialists’, Anna Bryson argues, have for some time ‘been offering a challenge to historians by showing much concern with the cultural codes, value systems and conflicts of value which underlie the productions of high culture’. In response, she urges her colleagues to recognise how an understanding ‘of the traffic between the two definitions of culture’ – culture both in the sense of ‘art’ and in the ‘broader and more anthropological sense of the ways in which a society or group orders and perceives itself’ – is ‘crucial in the study of the literature of manners’.³ However, I would argue that literary critics have yet to provide a sustained analysis of the relationship between literary form and manners: that is, a study of how the structuring of courtesy literature might both reflect and inform a particular apprehension of social and political interaction. For, though early modern literary critics have long

expressed an interest in the courtesy books, these texts are usually invoked to explain the emergence of a culture of jostling and competitive courtiership.⁴ More problematically, their discursive style tends to be overlooked, so that dialogic books are discussed alongside didactic prose treatises as if their different form did not matter. When their form *is* taken into consideration, moreover, it is presumed to exemplify a departure from, or a corruption of, a classical republican culture. The courtesy books are seen to disseminate an effete, dissembling courtly rhetoric that performs the subordination of the male aristocrat to a despotic monarch.⁵ In this respect, early modern critics of courtesy share with historians of eighteenth-century politeness the assumption that the discourse of manners engenders conformist and hierarchically sensitive behaviour and the view that the 'social' and 'political' realms function independently.⁶ However, we need not only to address what is distinctive about an earlier discourse of civility (as opposed to eighteenth-century notions of politeness), but to consider what a recovery of a sixteenth-century conception of the 'social sphere' might mean for our understanding of the period's political idiom.

This study has two broad aims. First, it argues that we need to attend more carefully to the dialogue form of the courtesy books, especially those which introduce and explore a new mode of speech, civil conversation. This speech form is derived from that same classical republican culture: that is, from the philosophical writings of the orator Cicero.⁷ Recognising this will allow us to recover a lost discourse. Courtesy books written as dialogues are often engaging in a formal exploration of Ciceronian 'honestas' or self-restraint. For Cicero, and the courtesy writers who follow his example, apparently dissembling conduct is also 'honest' when it facilitates negotiation between different and conflicting interests. Without 'honestas' – that is, without the self-restraint of potentially domineering speakers – there can be no conversation *or* critical reflection. Many of the courtesy writers and translators are engaging directly with this aspect of Cicero's philosophy; they aim to accommodate Roman 'honestas' to Italian 'onesto' or plain English 'honesty'.⁸ This is one of the fascinating and forgotten achievements of the courtesy books: that they contribute to the definition of a key concept of civility at a time when its meaning was highly unstable. In so doing, they offer a re-examination of the complex, sometimes conflictual, relationship between the individual and society. As I will argue, they are less interested in advising on tactics of self-promotion at court than in exploring ways of managing the relationship between self-interest and social duty, self-restraint and freedom and competition and cooperation in both social communication *and* commercial exchange. Indeed, their focus

is extended far beyond the narrow confines of the court. Some courtesy books are describing conversation which is as suitable for the market as it is for the court.

Secondly, this study reconstructs an English, protestant reading community for the Italianate courtesy books. It investigates how a network of friends, based in Cambridge, were responsible for the dissemination of this distinctive rhetorical culture: from the 1530s onwards, John Cheke, Thomas Smith and Roger Ascham and, in the 1570s, Gabriel Harvey and Edmund Spenser. What these readers share in common with the Italian courtesy writers is a commitment to understanding Cicero's philosophical writings, in particular *De amicitia* and *De officiis*, so as to re-shape social relations, inevitably to their advantage. This self-interested recovery of Cicero is well recognised.⁹ In this study, though, I will question a common form of ideology critique which tends to reduce social interaction to its most obvious manifestation: materialistic self-interest. The Elizabethan writers I will be analysing are of course self-promoting. Smith, the son of an Essex farmer, served under the Protector Somerset during the reign of Edward VI, and then became Elizabeth's ambassador to France in the 1560s, while, notoriously, Spenser, whose father was probably a journeyman tailor, became a landowner in Ireland. Harvey, the son of a Saffron Walden ropemaker, was less successful, though no less ambitious. He was appointed Lecturer in Greek in 1573 and, later, University Praelector in Rhetoric; however, he retired to Saffron Waldon in the late 1590s where he died in 1631. Even so, I want to explore, not how the ambitions of these men took both obvious and indirect forms in their life and writings, but rather, how they engaged in a process of dialogue and negotiation with their own aspirations and, in inevitably partial but deliberated ways, the interests of others.

A key aim of this book, then, will be to analyse how a group of humanists experimented with the dialogue form to express their personal aspirations whilst simultaneously recognising alternative and competing interests. We need to allow for the possibility that this negotiation was genuinely meant even as we identify the ways in which it failed or was exploited. In different ways, Smith, Ascham and Cheke, and later Harvey and Spenser, offer a self-conscious departure from the so-called 'cultural revolution' of the mid-Tudor Protestant reformers.¹⁰ They use civil conversation to challenge a moral argument that was central to the first wave of Reformation literature: that an individual should serve the commonwealth by restraining his or her appetite for social advancement and personal profit. They do so by engaging in different kinds of textual conversation in order to discover a form of social interaction between teacher and pupil, or male friends,

or indeed, individuals of different estates, which is capable of nurturing shared aspirations *and* sociability. In making this claim I am not denying that, as many have argued, the early modern period, with its expanding markets, print technology and, as some believe, increasingly centralised government, made possible a more individualistic ethos and instrumental association. Rather, I am arguing that we need to recognise the ongoing cultural significance of ideas of community and the common good with which any defence of self-interest or personal aspiration must negotiate.¹¹ The emphasis on the individual in this period remains part of a debate about one's 'duty' or 'obligation' to the commonweal; this is a difficult and disputed concept which is making a return in current debates about society and trust.¹²

In the sixteenth century this debate was only partly successful. We will need to be sceptical of Ascham's and Smith's efforts; the conversations they conduct are usually stage-managed by a dominant figure who clearly represents his own interest in being rewarded for the skilful management of others. Harvey and Spenser, in contrast, are more experimental; in their textual conversations they tend to question the role of the leading speaker, offering 'friendly' criticism of the attempts of early humanists at social negotiation. However, in the 1590s Harvey's own style of civility was to be criticised by the next generation of Cambridge graduates, especially by Thomas Nashe and Robert Greene. For all of these writers, though, the project of improving manners was inseparable from the pursuit of self-interest; this is not the same as the argument that reform is undertaken for the sake of self-promotion.¹³

Why then did civil conversation fail? An obvious reason is that this idealistic discourse could not keep pace with the increasing opportunities made available by ever-expanding markets and by colonisation. In the 1570s Harvey and Spenser experiment with the dialogue form to imagine a more open style of social communication for the benefit of the commonwealth. As a settler in Ireland in the 1590s, however, Spenser's priorities change. More obviously coercive means are needed to achieve civility. Irenius, the leading speaker of *A View of the Present State of Ireland* (c. 1596), argues that civil conversation – both familiar discourse and trade – will only achieve a functioning commonwealth after the brutal military conquest of the wild Irish has been accomplished.¹⁴ However, another reason is that the discourse is itself fraught with internal contradictions. Sixteenth-century humanists inherited an overlapping but distinct Socratic dialogue style which informed that rival genre to the courtesy book, the husbandry manual. The figures of the courtier and the husbandman offer different

styles of social and commercial exchange and also different styles of 'honesty' which are not easily translated into a modern political idiom. To understand these traditions we will need to be more open in our thinking about where we locate 'subversive' or 'conservative' agendas. The representation of the courtier as dissembling in much modern criticism, for example, indicates the victory of the plain husbandman as a social and cultural authority. Yet, there are good reasons why such plain-speakers are not to be trusted, not least because there is no way of knowing whether the claim to be telling the truth, or the promise of transparency, however plainly put, is not also a rhetorical ploy which aims to occlude the interests of others.

Chapters 1 and 2 of this study involve a reappraisal of the dialogue form of the well-known courtesy books such as Castiglione's *Il cortegiano*, Englished as *The Book of the Courtier* by Thomas Hoby in 1561, and Stefano Guazzo's *La civil conversatione* (1574), the first three books of which were translated by George Pettie as *Civile Conversation* (1581) and book 4 by Bartholomew Young (1586). The question of how we should read a dialogue that purports to be a civil conversation is explored in detail in chapter 1, which considers the critical possibilities and rhetorical slipperiness of the form of *Civile Conversation* – the treatise that gave the phrase 'civil conversation' its 'European currency'.¹⁵ This chapter studies the differences between the Roman (Ciceronian) and Greek (Socratic) dialogue forms, and considers what their confusion means for the debate about social duty and self-interest, especially for women. Chapter 2 explores Castiglione's challenging exploration in the *Courtier* of the potential of Ciceronian dialogue as a critical method, a means to put pressure on restrictive social conventions and assumptions about the political order. Chapter 3 addresses the difficult question of why a group of Cambridge-educated protestant reformers is so interested in this treatise. It argues that this community share with Castiglione a commitment to re-defining the meaning of honesty as part of a process of linguistic reform, and that this process is implicated in religious, political and social Reformation. It also recognises, though, that they compromise the apparent openness of Ciceronian conversation. In chapter 4 we will examine less familiar treatises, the anonymous *Cyvile and Uncyvile Life* (1579) and Lodowick Bryskett's *Discourse of Civill Life* (1606) (a courtesy book turned colonial tract which transforms the dissembling Italian courtier into a plain English husbandman). These books will help us to understand how the experimentation with the dialogue form in the period informs both a critique of dishonest or exploitative commercial exchange and the formulation of a discourse of self-improvement and colonial expansion. Chapters 5 and 6 consider the literary collaborations of Edmund

Spenser and Gabriel Harvey, which includes *The Shepheardes Calender*, as exemplary civil conversations that challenge the easy assumption of social authority by the earlier reformers. These final chapters aim also to recall what is innovative and distinctive about the attempt of early Elizabethan literary writing to achieve cultural influence and social and political change.

CIVILITY AND ITS DISCONTENTS

A potential danger with this attempt to recover the attachment to Ciceronian conversation in the sixteenth century is that it unravels the subtle critique of the ‘civilising process’ which has been so important to the development of theorised and ethical readings of literary texts in the last three decades. In *Practicing New Historicism* (2000), Catherine Gallagher and Stephen Greenblatt appeal to Johann Gottfried von Herder’s ‘principle of diversification’ – that there are different truths for different cultures – to support their commitment to ‘the abandonment of the project of charting the *translatio imperii*, the great westward trajectory of civilization from Athens to Rome to, say, London’.¹⁶ In this study, however, I will be exploring the attempt of the dialogic courtesy books to explore formally a Greco-Roman idea of *societas* as an association of communicating or conversing individuals. Since such an emphasis promises a return to an abandoned project, I think I owe an explanation. For this idea of society – best expressed by the Roman republican philosopher Cicero – now appears disingenuous, even deceitful, thanks partly to the influential counter-argument of Sigmund Freud which underpins modern critiques of the ‘civilising process’: that civilisation necessitates the repression of the instinctive, often violent assertion of the super ego. Freud’s *Civilization and its Discontents*, published in 1930, self-consciously turns Cicero’s myth of *societas* – and the Enlightenment tradition it inspired – on its head. In contrast to Cicero, who argues that men are naturally social, Freud insists that:

men are not gentle creatures who want to be loved . . . they are, on the contrary, creatures among whose instinctual endowments is to be reckoned a powerful share of aggressiveness. As a result, their neighbour is for them not only a potential helper or sexual object, but also someone who tempts them to satisfy their aggressiveness on him, to exploit his capacity for work without compensation, to use him sexually without his consent . . . *Homo homini lupus* [man is a wolf to man].¹⁷

Freud’s influence is apparent in Norbert Elias’s sociology of the courtesy books in *The Civilizing Process*, which explores the relationship between the rise of civility and state formation. Elias uses the language of Freudian

psychoanalysis – ego, super-ego, repression – to assert the psychological dynamics of a civilising process that increases the thresholds of embarrassment and encourages self-surveillance.¹⁸ More recently, Freud's insistence that 'it is impossible to overlook the extent to which civilization is built up upon a renunciation of instinct' has inspired the argument of Stephen Greenblatt in his ground-breaking *Renaissance Self-Fashioning* (1980) that the development of a courtesy tradition is homologous with colonial expansion.¹⁹

Against this insight, though, I will explore the critical possibilities which the discourse of civil conversation offered. In particular, I am interested in how the textual practice of civil conversation offered a method for demystifying commonplace ideas, while establishing new habits of thought. In *The Book of the Courtier* conversation is used to unmask the 'myth' of native nobility: nobility is exposed as a social practice rather than a birthright. Meanwhile, in the anonymous English *Cyville and Uncyville Life* it is used to demystify what its author sees as a form of 'false consciousness': a tradition of monologic, plain-speaking social complaint (represented, say, by the georgic idealism of Hugh Latimer in the 1550s). This tradition, which defended the need to suppress self-interest for the greater good of the community, is shown to be quietly self-interested. In all three books, though, there is an understanding that straight-talking is not adequately honest and a wish to expand the meaning of 'honesty' to include conduct which might be deemed ironic or dissembling.

This shift of focus from the disciplinary nature of the 'civilizing process' to the critical possibilities that civility offered particular social groupings – mainly, educated university men from relatively humble backgrounds – is not meant to be a 'whiggish' defence of the progressive democratisation of a civil society. I understand well the limits and, indeed, failure of this discourse, not least in relation to women. (It should be noted, though, that this failure is also often repeated by 'modern' critics of the civilising process, as Freud's persistent use of the male pronoun suggests.) The particular failure of civil conversation will be addressed in chapter 1 under the heading of 'domestical conversation'; in chapter 4, we will explore how the courtesy books, in conjunction with the husbandry manuals, did indeed inform colonial projects in Ireland. Meanwhile, my discussion of Harvey's and Spenser's collaboration in chapters 5 and 6 is not intended to herald the beginning of a sophisticated English literary culture, but to explore a moment of possibility revealed in the self-conscious conjoining of new styles of friendship and literary experiment in the 1570s.

My style of argument, however, was developed in negotiation with the critical practices which govern the so-called 'new historicism', to which I

am indebted. In particular, I wish to avoid the impasse that characterised much early new historicist criticism. There is a need to understand civil conversation as a discourse – to explore it on its own terms – so as to avoid making the unmasking of ideology the special prerogative of the modern critic. This imperative remains an issue even as leading ‘new historicists’ review their critical practice. In *Practicing New Historicism* Gallagher and Greenblatt brilliantly respond to their critics. ‘Our project’, they strenuously argue, ‘has never been about diminishing or belittling the power of artistic representations . . . but we never believe that our appreciation of this power necessitates either ignoring the cultural matrix out of which the representations emerge or uncritically endorsing the fantasies that the representations articulate’. The difficult question which might be posed of their critical work, though, is whether *its* form has always been adequate to the ambitious and thoughtful task they set themselves. In this most recent manifesto, for instance, they continue to defend the privilege of the modern critic who has the opportunity to recover ‘something that the authors we study would not have had sufficient distance upon themselves and their own era to grasp’.²⁰ Yet, there remains a need to work into historicist practice an acceptance of the fact that this distance also means that there will be some things which *we* cannot grasp, and a need to recognise that in avoiding ‘uncritically endorsing the fantasies that [past] representations articulate’, we might easily mistake or misunderstand their strategies of critique. This is critical ‘honesty’.

We can see the problem posed by suspicious reading if we attend to Greenblatt’s use of Philibert de Vienne’s French anti-court satire *Le Philosoph de Court* (1545) – *The Philosopher of the Court* – to demystify the courtly trope of *sprezzatura* (pretended ignorance) in *Renaissance Self-Fashioning* (1980), the formative example of new historicism. For Greenblatt, Philibert’s treatise is invaluable because it exposes the subtle working of courtly ideology in sophisticated texts like Castiglione’s *Courtier*. Philibert’s argument is that sixteenth-century courtesy books disguise their departure from classical ethics – represented by Plato, Aristotle and Cicero – so as to appear ethical, when in fact all they recommend is a superficial and amoral behaviour. This is a reading which makes sense to us historically once the courtier is envisaged at the court of an autocratic ruler. In such a context, we presume, it is difficult, if not impossible, to speak frankly or to influence policy. The essential mode of operation becomes the winning of favour, an aim which it is supposed must be secured with sycophantic display.

The Philosopher of the Court is a spoof courtesy book which is modelled on Cicero’s *De officiis*. The joke of this treatise is that *De officiis* is subjected

to a biased courtly reading, presumably after the fashion of a courtesy book like the *Courtier*. For example, its narrator follows Cicero when suggesting that the courtier's philosophy is based on the four cardinal virtues of wisdom, justice, fortitude and temperance, but he proceeds to offer ironic re-definitions: the courtier is wise if he knows how to deceive, and he is temperate if he is willing to be pleasing. Philibert also invents a fifth virtue, 'Grace', which represents the *sprezzatura* of courtly display paradoxically, as an ethical deceitfulness. 'Philibert's interest is in the working of the court mind at such moments', remarks Greenblatt, and especially in 'the social accommodation of an ethical embarrassment'. To make manifest this accommodation Greenblatt follows the moves made by the narrator in the chapter on Grace. The narrator begins by noting that Socrates has taught us 'that we should not maske, or disguise our selves'. He pauses for a moment because, as he has argued throughout the book, dissimulation is 'of so great force in our Philosophie', but he quickly proceeds to explain away the conflict of interest. Dissembling to accommodate others is not 'evill', he remarks, and then adds that Socrates 'Himselfe doeth serve us for example, for although he was ever like unto himself, constant and not variable, and desirous not to be seene other than he seemed: yet was he the greatest dissembler in the worlde'.²¹ Greenblatt's observation that 'Philibert has seen deeply into the mind he satirizes and cunningly mimics its forms of thought and expression' seems absolutely, perhaps *too* reassuringly, right.²²

This insight into the dishonesty of courtly ideology does not seem to have been shared by Philibert's English translator, George North, who, as Daniel Javitch observes, apparently mistook *The Philosopher of the Court* for a straightforward courtesy book.²³ His misreading of Philibert raises interesting questions about the reception of sophisticated continental courtesy books at the Elizabethan court. Still, it is easy to underestimate the insights of our forebears who were probably better schooled in classical philosophy than ourselves. To proceed with care we should recognise the possibility that, if North did misread *The Philosopher of the Court*, then he may have done so because of the superficiality of Philibert's own reading of Cicero.

The prologue articulates the reasons for Philibert's rejection of court culture quite clearly. In North's translation Philibert's narrator begins with a rant against the courtly philosopher who, living in the world, has 'no other guide than that blinde beast of common and popular judgement' rather than the promptings of Nature (sig. B5v). He attacks the courtier's confusion of the distinction ancient philosophers made between 'first nature', given us at our birth by God, and a corrupted 'seconde Nature', synonymous

with custom or habit, before going on to perform (ironically of course) just such a confusion (sigs. B7r–B8r). The narrator's early attack is meant to clarify the subject of the satire: the failure of courtly philosophers to distinguish between nature and custom, truth and lies, right and wrong. He wants to show us how courtly philosophers turn words inside out, wresting them from their true meaning for personal advantage. Yet, the joke is really on Philibert. The irony, as we will discover at more leisure in chapter 2, is that it is Philibert's misrepresentation of Cicero which actually approximates Cicero's interrogation of the ironic Socrates in *De oratore*: honesty for Cicero encompasses the kind of dissimulative – or accommodating – conduct which Philibert dismisses. Thus, a key speaker in this rhetorical manual admits that 'what impressed me most deeply about Plato [in his disguise as Socrates] was, that it was when making fun of orators that he himself seemed to me to be the consummate orator'.²⁴ Cicero and Castiglione understand that this kind of pretended ignorance is an important discursive tool. It helps them to expose the artificiality of the distinction between nature and custom or truth and lies insisted upon by some philosophers who, like Plato, are committed to the discovery of a universal Truth.

Readings of the courtesy books which emphasise their dishonesty are within the venerable tradition of Elizabethan anti-court satire, as Greenblatt's self-identification with Philibert suggests. But we should be wary of associating ourselves too readily with such truth-telling critics. Philibert's treatise offers a sophisticated study of the presumed ideology of courtliness, and yet his critical thinking relies on an overly simplified vocabulary of opposites drawn from the very Platonic tradition that Cicero is seeking to unmask: honesty versus dissimulation, the metaphysical philosopher versus the courtier deemed a slave to fickle opinion. These same terms are to be found in less sophisticated satires. The dialectic of Antonio de Guevara's *Libro Llamado Menosprecio de Corte y Alabanza de Aldea* (1539), translated into English in 1548 by Sir Frances Bryant as *A Dispraise of the life of the Courtier, and a Commendacion of the life of the labouryng man*, is between the courtier who 'occupieth himselfe in nothyng but in eatyng, drinkyng, & sleapyng' and inventing 'shiftes' and the husbandman (really a landowner) who recreates himself pleasantly and honestly in the village, fishing, netting birds and hunting with dogs. Since the court is a fantastical place, Guevara concludes, we should, like Plato, abandon its 'clamor & cry' and dwell in a village, in fact an *Academica* or 'schole' where we will find 'a pore, an honest, and a peaceable life'.²⁵ We might remember here the advice of the critical theorist Hannah Arendt to all plain-speakers in her essay 'Truth

and Politics', that the truth-telling favoured by Plato is a kind of despotism because it fails to take into account different opinions.²⁶

Ironically, it is Freud who shows us how we might accommodate a more dialectical reading of the civilising process. *Civilization and its Discontents* – 'that remorselessly bleak treatise for which all civilization is ultimately self-marring', as Terry Eagleton describes it – is one of several studies by Freud on the antagonistic relationship between man and 'civilization'.²⁷ In 1927 he published an earlier essay, *The Future of an Illusion*, which offers a rather different process of argument both to discredit 'civilization' and to defend psychoanalysis as the means to fulfil the sense of hope and possibility which the concept also carries. This essay is close in spirit to the civilising courtesy books. Its style of argument is dialectical; that is, it prompts us repeatedly to return to, and to rethink, familiar terms and concepts. One of those familiar concepts is 'illusion', another is 'fact'.

The essay begins with the same premise as *Civilization and its Discontents*, that destructive and anti-social feelings are a 'psychological fact' (p. 7), and the reaffirmation of the 'fact that the regulations of civilization can only be maintained by a certain degree of coercion' (p. 8). Freud also establishes that religion is a necessary supplement, serving 'to reconcile a man to the sacrifices he has made on behalf of civilization' with the illusory promise of fulfilment in the next life (p. 14). However, in contrast to the monologic *Civilization and its Discontents*, *The Future of an Illusion* includes an imagined antagonist who defends religion. Consequently, the progress of Freud's argument is gradual and contradictory, yet it allows for the questioning of the recognised 'facts' of religion and civilisation.

The psychoanalyst shares the same aims as the religious zealot, 'namely', the increase of 'the love of man and the decrease of suffering' (p. 53). But he differs in his adherence to, and contrary apprehension of, the 'facts' of his discipline. Our narrator recognises that '[r]eligious ideas are teachings and assertions about facts and conditions of external (or internal reality) which tell one something one has not discovered for oneself and which lay claim to one's belief' (p. 25). One might easily say the same of the 'psychological fact' that civilisation depends on coercion and repression. And yet, our narrator seeks to destabilise this 'fact' even as he asserts it, signalling his difference from the religious zealot. In this essay we learn to distinguish between religion as a psychological delusion (rather than an illusion) because it can never fulfil our wishes in this life, and the science of psychoanalysis as 'illusory' in the sense that it holds out the possibility of self-fulfilment. When the antagonist argues that our narrator is contradictory (and therefore deluded) because he asserts that 'men . . . are so entirely governed by their

instinctual wishes', and yet believes that 'civilization' might be achieved by rational rather than affective (and repressive) means, the narrator responds thus: 'It is true that men are like this; but have you asked yourself whether they *must* be like this, whether their innermost nature necessitates it?' (p. 47). Unlike the religious zealot, the psychoanalyst understands that 'facts' are not immutable or given, but the product of culture and education. The essay's method of argument aims to convey that the 'psychological fact' of the repressive nature of the civilising process is true only insofar as it is a stage in the way in which we think about ourselves.²⁸

REREADING THE COURTESY BOOKS

My argument that the dialogue form of the courtesy books really matters may seem straightforward enough but it marks a significant departure from our accustomed way of reading them. Anna Bryson may recommend the innovative analysis of the courtesy books by literary critics to social historians, but in fact these same critics have tended to fit this genre to well-established historical paradigms such as the 'crisis of the aristocracy', or the shift from a 'lineage society' to a 'civil society' (where the term 'civil society' connotes a more atomised social grouping).²⁹ Thus, Frank Whigham argues that English interest in courtesy literature 'arose during what Lawrence Stone calls "the century of mobility, 1540–1640", during which "English society experienced a seismic upheaval of unprecedented magnitude"'.³⁰ Whigham bases his argument that the courtesy books defend aristocratic privilege on Stone's statistical analysis of the swelling of the upper ranks of society in this period. The treatises, he argues, were written to reassure the established aristocracy of their 'natural' authority, but they were also used by aspiring courtiers eager to gain access to the corridors of power at the Elizabethan court by aping the manners of their superiors.³¹ To underscore their attractiveness to a jostling, competitive readership, however, Whigham ignores the dialogue form of some key texts, prompting a rather flat or literal reading of a frequently ironic and questioning body of writing. These books, he argues, 'formally invite . . . particulate consumption' by readers eager to become courtly. Such fragmented reading is typical of the period; 'established and mobile Elizabethans alike would deploy arguments on either side as need arose, without feeling either devious or conspiratorial – indeed, without sensing any contradiction at all'.³²

Some courtesy books do invite 'particulate consumption', enabling young men to get on quickly in the world. Giovanni della Casa's *Galateo* – made popular by R. Peterson's translation in 1576 – gives explicit advice on

how not to behave in public. On della Casa's advice we learn (among other things) not to inspect the contents of our handkerchiefs as if 'pearles and Rubies dropped from [our] braynes'.³³ More choice is offered by Simon Robson's pseudo-Italian courtesy book, *The court of civill courtesie* (1577), which claims to have been translated 'out of the Italian, by a Gentleman'.³⁴ However, even this text offers a rather rigid sense of correct social conduct. Robson claims on his title page that the text is 'Fitly furnished with a pleasant porte of stately phrases and pithie precepts' for young gentlemen who are 'desirous to frame their behaviour according to their estates, at all times, and in all companies'. This seems to be the strength of the book: that it gives practical sentences which enable young men to manage the tricky rules of deference which inform their social world. However, the complexity of this etiquette is perplexing to the modern reader. A gentleman who finds himself in the company of someone of lower rank than himself but yet highly esteemed is advised to give up his place at the table, though 'with such a modest audacitie, mingled with a smylyng grace, and curteous speeche, neither too lowde nor whisperyng, as the rest of the company may well perceive: it is the vertues, and not the man that is preferred, and that it is offered rather of a curteous disposition, then of a sheepishe simplicitie'. If this sounds too difficult a negotiation to achieve then we might employ one of Robson's ready-made phrases:

I pray you goe, for I love to follow the steps of mine elders.
 You must needes goe, for I cannot a waye to goe formost.
 On, on I pray you, you bee the next the dore.
 If you goe not wee shall strive all day, for I will not.
 You make too mutch adoe for so smal a matter. (B1r-B1v)

Not all texts, however, are prescriptive and not all invite 'particulate consumption'. Texts like *Civile Conversation* or *Cyvile and Uncyvile Life* are written as conversations rather than manuals, and their leading speakers ostentatiously pretend ignorance, or defer to the wisdom of their obviously junior or misguided interlocutors, for example, when the leading interlocutor of *Cyvile and Uncyvile Life*, the courtier Vallentine, generously admits to his friend, the country gentleman Vincent: 'I am very glad that my poore reasons have taken good effect, but therin I wil challenge no more to my selfe, then I deserve: which is, that I have put you in minde of that you either forgot, or else (for want of leysure) never considered: For I acknowledge you of much more wisdom and iudgement then I am'.³⁵ This style disseminates a practice of civility which may be assimilated by the careful reader, not the particulate consumers suggested by Whigham, but

those educated Elizabethan men who, like Gabriel Harvey, were evidently willing to read a text over and over again.³⁶

Recognising the reading practice these books encourage inevitably affects the way we should read them. Deference is not just a matter of doffing one's cap to a superior. As Gerald M. Sider explains, it also entails the 'diffuse or specific conscious adjustments people make to each other's claims in their lives *as a whole*', and it is integral to the constitution of 'oppositional social relations'.³⁷ *Sprezzatura* or feigned ignorance may look like a disdainful snub to 'untowardly asseheades' and suggest an unwillingness to clarify the rules which might allow outsiders entry into an aristocratic 'club'.³⁸ In some contexts it must have worked in just such a way to exclude outsiders. Yet, as the example of Vallentine in *Cyvile and Uncyvile Life* shows, it is also used in civil conversation 'ideally' to draw less assured interlocutors into social exchange, while requiring self-restraint in confident and dominant speakers. As we will see in chapter 4, in this particular treatise such self-restraint really matters; its author is also providing a critique of the 'honest' generosity of the traditional manorial lord which conceals his exploitation of tenants.

This study signals a shift away from the individualistic and competitive paradigm taken for granted by recent readers of the courtesy books, to an emphasis on negotiation.³⁹ It complements the recovery by some social and cultural historians of the importance of ideas of community to early modern culture.⁴⁰ The longstanding assumption that the early modern period marks a transition from one form of social organisation, the 'community', to another, 'society', argue Alexandra Shepard and Phil Withington, 'ignores the fact that medieval settlements were stratified, conflictual, demographically unstable, and integrated into national institutional structures'. It also ignores the polyvalence of the term 'community' in the sixteenth century. Recent work has stripped this term of its nostalgic association with a lost 'merry England', using it more loosely to connote simply "small groups, bounded in one way or another".⁴¹ This definition allows in turn for studies of communities to focus on 'conflict and power', rather than just 'the processes of reconciliation'.⁴² What a literary study of the early modern courtesy books and their readers can contribute to this burgeoning field is the recovery of a discourse of negotiation which is predicated on a particular paradigm, honest rivalry. Rivalry is 'honest' when it recognises and tries to manage 'conflict and power' in social relationships. This paradigm is employed by humanists to replace one ideal of community, the security of which rests on the preservation of the 'estates', with another, in which the play between the conflicting interests of men of similar and different

estates is seen as productive *and* sociable. The phrase honest rivalry – which I derive from Cicero's study of friendship, *De amicitia* – is a more useful term than 'competition' because it forces us to recognise the importance attached to community in this period when the straightforward assertion of self-interest was deemed anti-social and unethical.⁴³

With this emphasis on community in mind, this study also challenges the deep-rooted assumption that the courtesy books defend the privileges of an established elite by naturalising vertical relations. The style and content of these books would have been recognised by educated, aspirational men from a variety of backgrounds as having been written for them. Among many social historians there is an awareness of the need to question the gentrification of civility. Thus, Jonathan Barry reiterates a paradox of the courtesy books, that the manners such treatises recommend are 'in many cases, those practised by servants and tradesmen, as well as other inferiors, in their dealings with their masters, customers, and superiors'.⁴⁴ In his study of the civility – or 'bourgeois collectivism' – of urban freemen in early seventeenth-century London, Barry presents a challenge not just to the gentrification of civility, but also to a concept which defines much socio-economic study of the early modern period, the rise of 'possessive individualism'. The work ethic of 'thrift, respectability, and industry' associated with urban freemen is usually 'seen as the foundation of individualism', he argues, but success was assumed by them 'to depend on collective rather than individual action', and was 'accompanied by a set of overtly collective values, of sociability and good fellowship'. These values were learned in specific contexts rather than books, which included the private household as well as a variety of public settings: alehouses, inns, coffee houses and 'other places of entertainment'.⁴⁵

Barry draws a distinction in his essay between courtesy books which taught gentlemen how to behave like tradesmen and the experience of associational life which taught urban freemen how to be civil. However, we need not only to resist seeing the dialogic courtesy books as representing theory rather than practice, but to expand our conception of their readership to include university men from humble, artisanal backgrounds as well as courtiers. Courtesy books written as dialogues already disseminate a practice of conversing; they may even have been read aloud in company as 'live' dialogues.⁴⁶ In England, they attracted the interest of educated male readers who were successfully engaged in forming practical friendships and networks in the service of the protestant Reformation. For example, Thomas Hoby began his translation of Castiglione's *Courtier* in the 1550s while travelling on the continent; it was printed in 1561, along with a

letter from his former tutor, John Cheke. This translation is praised by another friend, Roger Ascham, in his influential *The Schoolmaster*.⁴⁷ It is true that these men all share in common some connection to the 'court': Cheke was tutor to prince Edward while Ascham was tutor to the princess Elizabeth, and later her Latin secretary. Another member of this group, Thomas Smith, was ambassador to France and also an advisor to the Privy Council. The primary connection between them, however, is that they are members of an informal network of friends designated 'the Athenian tribe' active in Cambridge in the 1540s, who later migrated to London.⁴⁸ The identity of this group lies in the attempt of Cheke and Smith to promote the Erasmian pronunciation of Greek in the 1540s, and in a commitment to the 'new learning' which encouraged a return to sources, both the Bible and classical texts. They are also committed to the recovery of classical forms of social and political organisation.⁴⁹ Their interest in Castiglione is inspired by a desire to develop the English vernacular through translation and, also, to understand Cicero: Hoby in particular understood that Castiglione had offered a brilliant new reading of *De oratore* and *De officiis* which would help to develop 'civyll condicions' among his compatriots.⁵⁰

For these humanists the development of 'civyll condicions' was integral to the success of the Reformation. On the one hand, they are searching for a 'civil' speech form which might carry their challenge to the social and political order without seeming divisive and factional; on the other hand, they understand that the process of Reformation entails (in theory) an expansion of participation in both religious and political debate. One way in which political participation is expanded in the period is through the incorporation of towns and boroughs (and the second half of the sixteenth century saw a dramatic increase in this policy). Incorporation entails the extension of metropolitan institutions – magistracy, parliament, counsel, law – to local communities. It provides an infrastructure which facilitates different kinds of conversation, including the civil varieties favoured by the humanists.⁵¹ Incorporation was often accompanied by debate about civic and republican idioms. John Barston, a graduate of St John's College, Cambridge and the new town clerk of Tewkesbury, notes Markku Peltonen, celebrated the incorporation of his town with the print publication of a prose treatise that explores Ciceronian ideas of society, sociability and honesty in *Safeguard of Societie* (1576). The courtesy books so eagerly translated in this period also support interest in civic culture. 'A sixteenth-century Englishman perusing George Pettie's translation of Guazzo's *The civile conversation*', writes Peltonen, 'could read of the importance of public debate', for 'commonwealthes, Cities, yea, small Townes, do they
